

ACTIVE ELECTROMAGNETIC SHIELD

Energy! It's all around us in the form of radio waves or in more technical terms, electromagnetic frequencies (EMF). EMF can be extremely dangerous, just ask someone with cancer who has lived under high voltage electrical lines. The exposure to this potentially harmful radiation has been almost impossible to escape, UNTIL NOW!

Vortex Research Inc. which has been in operation since 1984 providing leading edge product development for the private sector, governments, universities and the military, has created the first mobile Active EMF Shield (patents pending). Not much larger than a package of cigarettes, the device creates a full body EMF shield, operates as a Schumann Field Generator and has a built-in Micro-Current Generator.

How It Works

In the **Active EMF Shield** mode, the device measures EMF sensed at the users skin and produces an equivalent complex inverse EMF wave. This inverse wave is sent back to the skin surface where it collapses the sensed EMF through wave summation. In this mode, the device only produces an output when EMF is sensed at the skin.

In the **Schumann Resonance Generator** mode, the device uses both the input and output sensors as transmitters of a user selectable frequency of 7.83, 14.6 or 20.8 hertz. The users skin becomes the antenna and produces the Earth's resonant cavity frequency.

In the **Micro-Current Generator** mode, the input sensor is used as the return path and the output sensor is used as the current source. Current in the range of pico amps to microamps is passed to the skin. The device connects to the skin using two disk shaped electrodes.

Additional Technical Information

Through additional research conducted by Vortex, it was found that the process of wave inversion and summation can also produce beneficial results within the human body. The normal EMF state of the body is chaotic, a cacophony of EMF signals which results in a noise signature. But, much like the brain during an epileptic event, organs which are dysfunctional produce larger asymmetrical frequencies that act like carrier waves of the body's "noise." In the Active EMF Shield mode, these errant internal frequencies are also targeted, inverted and summed which may produce additional health benefits.

Purchasing

The Active EMF Shield can be purchased directly from Vortex Research Inc in Canada or through distributors in Germany (EU), South Africa, New Zealand, Australia and the United States. For more information on the product, pricing and distributor information, please contact:;
